HOSPITAL NAME/ADDRESS	PATIENT NAME/INFORMATION

PROGNOSTIC FACTORS (SIT	E-SPECIFIC FACTORS)	General Notes:
REQUIRED FOR STAGING: NONE CLINICALLY SIGNIFICANT: Size of Lymph Nodes: Extracapsular Extension from Lymph Nodes for Head & Head & Neck Lymph Nodes Levels I-III:	For identification of special cases of TNM or pTNM classifications, the "m" suffix and "y," "r," and "a" prefixes are used. Although they do not affect the stage grouping, they indicate cases needing separate analysis.	
Head & Neck Lymph Nodes Levels IV-V:	 -	m suffix indicates the presence of multiple primary tumors in a single site and is recorded in parentheses: pT(m)NM.
Other Lymph Node Group: Clinical Location of Cervical Nodes: Extracapsular Spread (ECS) Clinical: Extracapsular Spread (ECS) Pathologic: Human Papillomavirus (HPV) Status: Tumor Thickness:		y prefix indicates those cases in which classification is performed during or following initial multimodality therapy. The cTNM or pTNM category is identified by a "y" prefix. The ycTNM or ypTNM categorizes the extent of tumor actually present at the time of that examination. The "y" categorization is not an estimate of tumor prior to multimodality therapy.
Histologic Grade (G) (also known as overall grade)		r prefix indicates a recurrent tumor when
Grading system □ 2 grade system □ 3 grade system □ 4 grade system □ No 2, 3, or 4 grade system is available ADDITIONAL DESCRIPTORS Lymphatic Vessel Invasion (L) and Venous Invasion (V) Invasion (LVI) for collection by cancer registrars. The should be used as the primary source. Other sources Priority is given to positive results. □ Lymph-Vascular Invasion Not Present (absent)/N □ Lymph-Vascular Invasion Present/Identified □ Not Applicable □ Unknown/Indeterminate	College of American Pathologist (CAP) Checklist may be used in the absence of a Checklist.	staged after a disease-free interval, and is identified by the "r" prefix: rTNM. a prefix designates the stage determined at autopsy: aTNM. surgical margins is data field recorded by registrars describing the surgical margins of the resected primary site specimen as determined only by the pathology report. neoadjuvant treatment is radiation
Residual Tumor (R) The absence or presence of residual tumor after treatm with neoadjuvant therapy there will be residual tumo incomplete resection or local and regional disease th tion. RX Presence of residual tumor cannot be assess R0 No residual tumor R1 Microscopic residual tumor	r at the primary site after treatment because of at extends beyond the limit of ability of resec-	
☐ R2 Macroscopic residual tumor
